HOPE'S® INTRODUCES OLD WORLD SUITE™ STEEL WINDOWS AND DOORS

JAMESTOWN, NY — Hope's® Windows, Inc., the nation's largest and most experienced manufacturer of custom, solid hot-rolled steel and bronze window and door systems, is pleased to announce the release of their fully developed, tested and certified product line – Hope's Old World Suite™. The new product, with its incredibly thin and elegant arrow-shaped steel frame profiles, represents a return to Old World style with the benefit of over 100 years of advancements in modern performance.

“This suite of window and door profiles pays tribute to our century-plus legacy as a custom fabricator and our prominent expertise in historic preservation,” says Brian Whalen, Hope's Vice President of Sales. “We have combined the unique aesthetics of an early 1900's era hot-rolled steel product with the strength and performance to meet present-day building code criteria. The result is a one-of-a-kind luxury window and door system, particularly well suited for the residential market.”

Hope's Old World Suite's steel profiles closely resemble the 'three-point casement' profiles that were routinely in use by the company in the early 20th century. More recently, Hope's developed new, modern steel arrow-shaped profiles in response to a need for historically accurate, high-performance replacement steel windows for a restoration project at Pearl Harbor Naval Shipyard. The resulting steel profiles replicated and preserved the visual features of the historic buildings.

The popularity of these profiles quickly grew in the luxury residential market, thus challenging Hope's to develop a full product suite. Old World Suite is the culmination of over a century of technological innovation: a complete product line that combines the striking visual appearance of the past with performance of the present, including Hope's innovative Thermal Evolution™ technology.

HOPE'S®

Old World Suite steel windows and doors offer extremely narrow sightlines with the ability to accept monolithic or insulated glass for energy efficiency. The historically accurate profiles and sightlines are ideal for new buildings as well as replacement projects and for both interior and exterior applications.

Key Product Features

- Unparalleled aesthetics
- Fusion welded frame and muntin construction
- True or simulated divided lite arrow muntin options
- Virtually unlimited fixed and operable window configurations
- Swing, pivot, sliding, and folding door systems
- Hope's exclusive Power of 5™ Finishing System including hot-dip galvanizing, abrasion resistant epoxy powder primers, and UV-stable polyurethane top coats in unlimited colors
- Thermal Evolution™ technology available
- Hurricane/Impact rated options available

exterior welded steel profile

True Divided Lite Muntin
Sightline: 7/8"
exterior welded steel profile

Hope's® Windows, Inc. has handcrafted the world's finest windows and doors for over a century. Hope's custom-designed, solid hot-rolled steel and bronze doors and windows are universally praised for their strength, durability, and unparalleled aesthetic value. Hope's prides itself on a long-standing commitment to safety and certification, and the company subjects its products to more third-party testing than any other steel window and door manufacturer. Inherent material strength, along with Hope's meticulous manufacturing processes, finishing techniques and extensive testing, result in windows and doors that last in even the most extreme environments – sustaining their beauty and performance for generations.
